

# 2SGA-1000

## Ultra-Slim Gamma-Ray Scintillometer Probe

The new 2SGA-1000 ultra-thin gamma-ray scintillometer probe is designed for shallow soil investigations.

The tool can be operated from MGXI or Matrix Loggers and a custom small diameter cablehead. With an outside diameter of only 18.3 mm (0.720 inches) and high-resolution scintillation detector, the tool can be run through CPT casing to map lithology horizons.

**PMT Type R7400.**

*Alpha Spectra 76 mm  
x 13 mm diameter.
